

ABSTRACT

A method and system for adding real-time, interactive functionality to a web-page, e.g., a HTML document, that enables interaction between and among a plurality of users viewing the same web-page. Software stored on and operable in connection with a server computer comprises a server component and a client component. The server component provides general server functionality and proxy server functionality on the server. The client component is downloadable by the server for storage on and operation in connection with one or more client computer, and adds real-time, interactive functionality to a web-page.
